

## Total Body Photography System

### Problem

Acquire an high resolution image from a human body which cover any part.

Some possible applications are:

- Mole Analysis
- Dress measurements
- Evaluation of body fat
- ...

Patent: IT0001397636

### Solution

All market solution moves the camera to capture the images necessary.

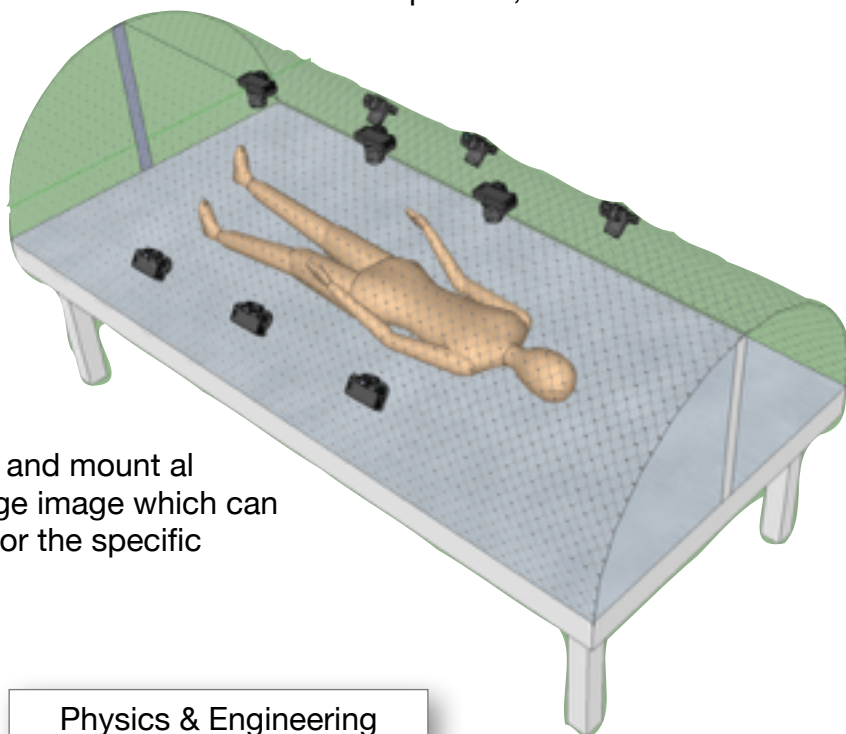

Every time you need a high-resolution picture, they takes at least 5 to 10 minutes, and the person it's difficult stay quiet and stable.

Our system uses fixed cameras and the capture takes less than a second.

The image is more stable and precise, and

### Technology

The system is based on a computer which give the command "shoot" to all cameras at the same time and mount all the images in one very large image which can be processed as needed for the specific application
